

## The Millennium / MSi Advantage

**Secure Architecture Review:** We review the current security posture of your IT and OT Networks. This includes validating the architectural design of the networks, reviewing standards compliance, and assessing your organization's ability to detect and respond to attacks.

**IT Network Risk Reduction:** Based on the results of our Secure Architecture Review, we work with you to mitigate identified vulnerabilities and improve your IT Network security posture. This step enhances your current IT security posture, while preparing your environment for enhanced OT Network security provided by MSi's platform.

**OT Network Risk Reduction:** During this phase, we analyze and provide mitigations to vulnerabilities identified on OT systems. This phase includes the installation of MSi's unique and innovative technologies to provide true security to your Control System Network.

**Secure Architecture Validation:** Upon completion of the IT and OT Network Risk Reductions, we verify our security implementation and validate that your environment is protected from emerging threats in the ICS landscape.

**Hunt Service:** Cyber threats are an ever evolving domain. Our Hunt Service will actively monitor and observe IT and OT network events and identify anomalies indicative of active compromise.

**Incident Response Service:** While unlikely attacks do happen, and we aren't arrogant enough to believe that you are ever 100% secure. Our tailored Incident Response service will provide complete analysis and mitigation of IT and OT threats.

**Maintenance Support:** Nothing lasts forever, and environments change. We provide 24x7 monitoring and maintenance of all systems to ensure continuous protection.
